

Uganda Christian University

Faculty of Engineering Design and Technology

Department of Computing and Technology

INTERNSHIP LOG BOOK

Student Name: MAGEZI RICHARD ELIJAH **Registration No:** M24B13/019

Programme: BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY

Institute Supervisor: MRS. SARAH MUWANGUZI **Contact:** 0788029654

Host Organization: UGANDA CHRISTIAN UNIVERSITY

Host Supervisor: MR. KENNETH MUSASIZI **Contact:** 0788029654

Internship Period: From: 4TH MAY 2026 **to:** _____

WEEK: 1		FROM(DATE): 4 TH MAY		TO (DATE): 8 TH MAY
Date	Activity	Lessons learned	Supervisor's Comment	Supervisor's Signature
4 TH MAY	Signed NDA; attended orientation with Mr. Kenneth Musasizi regarding department tracks (Cloud, Software, Sys Admin) and safety. Fieldwork: Setting bases and mold boxes for security cameras; UCU help desk service for Alpha/Eduroam	Learned the importance of daily stand-ups and the organizational structure of UCU UIS sectors. .		

5 TH MAY	Network Administration session with Mr. Dennish Komakech; introduction to network monitoring and diagnostics. Hardware setup of MikroTik cloud switches and point-to-point access points at Honor College.	Learned to use Nagios for tracking device states (unreachable vs. down) and Winbox for identifying devices on a network. Observed that MikroTik hardware boots faster than Cisco switches; learned troubleshooting for server connection issues.		
---------------------	--	--	--	--

6 TH MAY	Attended Alpha Office meeting: Devotion and presentations on the Alpha Meal Plan system and Fleet Module Concept development for a dynamic ticketing system as assigned by Mr. Amos.	Understood system architecture for meal booking and how to use open-source coordinate maps for vehicle tracking. Learned how to translate business requirements into functional flow charts and system logic.		
7 TH MAY	Refined the Ticketing System project; created sequence diagrams, use case diagrams, and a formal concept note.	Learned how to design system workflows and present project feasibility to supervisors for feedback.		

8 TH MAY	Backend development for the Queueing system; frontend design planning and project stand-up.	Gained experience in architectural planning for full-stack applications and backend logic design.		
WEEK: 2 FROM(DATE): 11 TH MAY TO (DATE): 15 TH MAY				
Date	Activity	Lessons learned	Supervisor's Comment	Supervisor's Signature

11 TH MAY	Formal UIS Internship Orientation: Remarks from Mr. Kenneth, Mrs. Dorcas, and Mr. Amos. Group presentation of the Queueing System project led by Mathew Mukasa.	Deepened understanding of UIS expectations and specific requirements for the networking section. Learned the importance of peer-led presentations and incorporating supervisor feedback into live projects.		
13 TH MAY	Introduction to cable splicing and network documentation. Deployment: Loading the Queueing system onto a Docker image file on a virtualized server via static IP	Learned that every cable has 12 cores and the critical role of documentation in tracking campus-wide connections.		

14 TH MAY	UIS week planning with Mr. Kenneth and a formal meeting with the Director of UIS, Ms. Rebecca.	Learned about professional goal setting and corporate communication within a departmental leadership structure.		
----------------------	--	---	--	--

15 TH MAY	The day began with a technical assessment of network devices via Nagios, which identified connectivity issues with access points at the main gate and in room N9. While the main gate switch was successfully restored remotely, the N9 unit required physical troubleshooting. Following this, we transitioned to field operations to configure an access point for the livestreaming of the interfaculty games. Later, we performed a thorough camera and projector audit in the N block before preparing computer equipment for transport to the Ankrah facility for students on recess. We also dedicated time to advancing the project assigned by Mr. Aggrey, incorporating guidance from both him and Mr. Amos to overcome technical obstacles. The afternoon was concluded with a presentation of our refined queuing	Collaborating with mentors like Mr. Aggrey and Mr. Amos demonstrated that navigating technical challenges is often more efficient when leveraging senior expertise early in the troubleshooting process. Furthermore, the feedback session reinforced the critical role of cybersecurity in software development; understanding that application features must be accompanied by essential security protocols, such as SSL encryption, is a vital takeaway for ensuring professional-grade		
----------------------	--	---	--	--

	system application to Mr. Amos and Mrs. Dorcas, where we received constructive feedback and were instructed to implement SSL certificates to ensure robust system security.	deployment.		
--	---	-------------	--	--

WEEK:		FROM(DATE):	TO (DATE):	
Date	Activity	Lessons learned	Supervisor's Comment	Supervisor's Signature

19 TH MAY	The day commenced with a progress review of our ongoing assignment with Mr. Aggrey, followed by a collaborative session on printer management conducted by Mr. Kenneth and Mr. Marvin. We then prepared and presented a quotation for a video wall system, incorporating Mr. Kenneth's feedback and establishing a centralized Google Drive folder for improved documentation storage. Technical training continued with a fiber splicing session led by Mr. William, where we practiced splicing four-core cables. The afternoon focused on hands-on printer maintenance, specifically troubleshooting techniques and the careful handling of ink cartridges, concluding with a comprehensive session on effective inventory management practices.	This day reinforced the necessity of structured professional workflows, particularly regarding the centralization of documentation and accurate financial estimation for hardware projects. The repeated emphasis on fiber splicing and printer maintenance underscored that technical proficiency is incomplete without a rigorous commitment to safety protocols and the delicate handling of sensitive equipment. Furthermore, the shift toward inventory management highlighted how critical organizational habits are		
----------------------	--	---	--	--

		to the smooth operation of an ICT directorate, proving that operational success relies as much on systematic tracking and resource maintenance as it does on core engineering skills.		
--	--	---	--	--

20 TH MAY	Our day began with personal project development before transitioning to a logistical task in rooms N12 and N13, where we organized tables, unlocked and disconnected computer systems, and reassembled them into functional configurations in their new location. Midday was dedicated to a professional development meeting with the director, Mrs. Rebecca, regarding zero trust security models, followed by a departmental Bible study led by Mr. Joash. We concluded the afternoon by receiving a new project assignment from Mr. Twongire, which involves developing a website for the department, including detailed requirements and initial guidance.	This experience highlighted the importance of physical logistics and organizational structure in maintaining an efficient lab environment, proving that infrastructure management is as essential as software development. The session on zero trust models provided a valuable shift in perspective, emphasizing that modern security must be proactive and skeptical rather than perimeter-based. Furthermore, balancing technical project requirements with the		
----------------------	---	---	--	--

		department's communal and spiritual activities underscored the value of maintaining professional, academic, and social cohesion within a technical work environment.		
--	--	--	--	--

21 ST MAY	I began by working on the UIS booklet assigned to me by Mr.Kenneth. Gaining a template proved challenging so I decided to create my own based off of the UIS themes and colors. In the afternoon Mr.Twongyire met with us once again and guided us on Cloud Panel and WordPress. Our assignment was to redesign one of the school websites after which we were called for a meeting to discuss the proceedings of the AgentCon event that was to happen the next day.	I learned the value of initiative when facing creative bottlenecks; creating a custom template rather than struggling to adapt an ill-fitting one proved more efficient and resulted in a more cohesive final product. Furthermore, the introduction to Cloud Panel and WordPress expanded my technical toolkit for web management, reinforcing the importance of platform-specific skills in professional development. Coordinating for the AgentCon event also highlighted how critical		
----------------------	---	--	--	--

		thorough logistical planning is to the success of large-scale professional gatherings.		
--	--	---	--	--

22 ND MAY	The day began early with preparation for the AgentCon event, which focused on the evolution of AI, its problem-solving capabilities, and the emerging challenges it presents. We explored the integration of AI agents within Integrated Development Environments (IDEs) and attended various presentations showcasing innovative AI-driven solutions, including a specific look at AI's transformative impact on the finance sector. In the afternoon, Mr. Twongyire introduced us to several essential web development tools and platforms, including Chatwoot for customer engagement, the Elementor page builder, and specific plugins like Jeg Kit. We also explored ThemeForest as a primary resource for acquiring professional website themes and templates.	This experience provided a vital perspective on the current trajectory of technology, highlighting that while AI is a powerful tool for accelerating the resolution of known problems, it also introduces a new, complex landscape of ethical and technical challenges that developers must navigate. Learning about AI agents in IDEs underscored a shift toward more autonomous development workflows, while the practical afternoon session reinforced the		
----------------------	---	--	--	--

		necessity of leveraging existing frameworks and marketplaces—like Elementor and ThemeForest—to build professional, scalable web solutions efficiently. Understanding these tools not only streamlines the design process but also prepares us to deliver robust, industry-standard digital experiences.		
--	--	---	--	--

WEEK:		FROM(DATE):	TO (DATE):	
Date	Activity	Lessons learned	Supervisor's Comment	Supervisor's Signature

25 TH MAY	The day began with a catch-up meeting led by Mr. Kenneth, which served as a coordination session to align our individual tasks and ensure cohesive teamwork across the department. During this meeting, he emphasized professional meeting etiquette, specifically instructing us on the importance of carrying notebooks and pens to document discussions and action items for increased efficiency. In the afternoon, we resumed our technical training with Mr. Twongiyere, who assigned further practical tasks focused on advancing our WordPress website development skills.	This session reinforced that technical ability is only part of the professional equation; adopting disciplined administrative habits, such as meticulous note-taking, is essential for maintaining accountability and clarity in a fast-paced work environment. Furthermore, the transition from high-level departmental coordination to focused WordPress development highlighted the necessity of balancing interpersonal communication with technical execution. Learning to document instructions effectively during team meetings ensures that complex requirements are not lost, ultimately leading to more		
----------------------	---	--	--	--

		reliable and accurate project outcomes.		
--	--	---	--	--

26 TH MAY	The day began with the structural development of the WordPress website as tasked by Mr. Twongyire, alongside providing technical support to new students regarding Alpha, Moodle, and Eduroam connectivity. In the afternoon, we moved into advanced technical training, where Mr. Twongyire provided hands-on guidance on website editing, manual website migration, and database management within an Ubuntu server environment. The session also covered essential server-side file navigation, as well as the implementation of integrated security features and SEO optimization tools to enhance both site integrity and discoverability.	This experience highlighted the critical link between user-facing website design and the backend server architecture required to support it. Mastering database management and file navigation in an Ubuntu environment is a significant step beyond simple web design, as it provides the foundation for troubleshooting performance issues and ensuring security. Additionally, the mix of front-end development and student technical support served as a reminder that a well-rounded IT professional must be equally capable of managing complex backend infrastructure and		
----------------------	--	---	--	--

		effectively communicating technical solutions to end-users.		
27 TH MAY	Under the guidance of Mr. Mbogo, the team completed a network infrastructure installation at the Sabiti halls office, which involved splicing cables at both the gym manhole and the exterior of the hall, gathering necessary materials from the journalism building and storage, and mounting trunking along the office walls. After clearing the workspace, we secured the trunking, drilled pathways through the walls for cabling, routed the network lines, and connected them to the office switch for external network access.	This experience provided practical insight into the end-to-end process of structured cabling, specifically highlighting the importance of meticulous planning when measuring and mounting trunking to ensure a clean, professional installation. Furthermore, it underscored the necessity of team coordination when managing equipment logistics and demonstrated the technical precision required for effective cable splicing and wall penetration to maintain signal integrity.		

--	--	--	--	--

WEEK:		FROM(DATE):		TO (DATE):
Date	Activity	Lessons learned	Supervisor's Comment	Supervisor's Signature

5 TH JUNE	Our team conducted an outreach program at Kayunga Referral Hospital, beginning with the organization and loading of essential supplies, followed by transport to the facility. Upon arrival, we adhered to security protocols regarding photography, coordinated with the head nurse to understand our duties, and meticulously unpacked, organized, and packaged the donated items to ensure they were ready for distribution to the new mothers. We also toured various hospital wings to learn about their specific functions before concluding the visit with a final expression of gratitude from the staff and a commemorative group photo.	This outreach initiative highlighted the critical importance of logistical preparation and adherence to institutional protocols when engaging in community service.		
----------------------	--	--	--	--

10 TH JUNE	Our team completed the installation and repair of security infrastructure at the Wandegeya gate, which involved intricate cable splicing for a switch and the application of an Optical Time-Domain Reflectometer (OTDR) to verify signal integrity and troubleshoot potential interference in the fiber optic lines. During the afternoon, we shifted our focus to server-side tasks, performing a WordPress installation on an Ubuntu environment and configuring the platform to interface directly with our personal device IP addresses, before spending the remainder of the day providing technical assistance in a helpdesk capacity.	This experience provided a practical understanding of how fiber optic testing equipment functions, specifically how laser-based diagnostics allow for the precise identification of signal loss or physical faults within a network. Furthermore, the transition to software deployment reinforced the importance of bridge-building between server environments and local network hardware		
-----------------------	---	---	--	--

11 TH JUNE	Our morning was dedicated to advancing the WordPress assignment, where we focused on collaborative reviews and troubleshooting various technical errors encountered across our assigned tasks.	The importance of iterative debugging and peer review in software development, demonstrating how methodical error handling is essential for maintaining site stability and functionality.
